

# Training Courses for Transportation of Biological Material

Certification  
Course

## Certification Course

# Infectious Substances & Biological Specimens

## Who should attend?

Professionals managing or directly involved in the shipping of infectious substances, biological specimens and dry ice. The certification course will be particularly beneficial to personnel from pharmaceutical and biotech firms, central laboratories, CRO's, investigator sites and research organisations, who wish to update their knowledge to current industry standards.

## What you don't know can cost you

- The shipper and the courier are directly responsible for adhering to the proper global transportation regulations.
- Anyone involved in the preparation or shipping of dangerous goods should have appropriate training.
- Non compliance of the Dangerous Goods Regulations can result in fines imposed by various government authorities.
- In this environment of increased enforcement, now more than ever, it is important for sponsors, laboratories and shippers to understand and follow the regulations governing the transportation of infectious substances, biological specimens, dry ice, and the legal responsibility for shippers and sponsors.

# Learn from a global leader you can trust

World Courier is a global leader in the shipping of clinical samples, with many years of experience in the handling of time-critical and temperature-controlled consignments. In a further effort to assist shippers, we have developed a comprehensive and “hands on” one-day program for those that require Dangerous Goods training. Our instructors are CASA approved and concentrate specifically on the correct packaging and documentation of specimens for air transport. The efficient and correct transportation of samples is crucial to the success of clinical trials. Not only do complex regulations need to be complied with precisely, but receipt of samples in perfect condition is also essential. In-depth knowledge is vital if this is to be achieved.

## One Day Certification Course

The one day certification course will help you to:

- Identify your and your firm’s responsibilities under international and national law
- Obtain certification to ship infectious material & biological specimens
- Classify specimens for transport
- Select proper packaging
