

856 Ship Notice/Manifest

Functional Group ID=**SH**

Introduction:

This Draft Standard for Trial Use contains the format and establishes the data contents of the Ship Notice/Manifest Transaction Set (856) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to list the contents of a shipment of goods as well as additional information relating to the shipment, such as order information, product description, physical characteristics, type of packaging, marking, carrier information, and configuration of goods within the transportation equipment. The transaction set enables the sender to describe the contents and configuration of a shipment in various levels of detail and provides an ordered flexibility to convey information. The sender of this transaction is the organization responsible for detailing and communicating the contents of a shipment, or shipments, to one or more receivers of the transaction set. The receiver of this transaction set can be any organization having an interest in the contents of a shipment or information about the contents of a shipment. Please note **the Product Qualifier code used in the 856 transaction must match the Qualifier Code used in the EDI 850 transaction sent by AmerisourceBergen (ABC).**

Notes:

Elements noted as "Must Use" are required by ABC, whether the X12 Guidelines has them marked Conditional (C) or Optional (O) in the Attributes column.

Summary:

<u>Page No.</u>	<u>Pos. No.</u>	<u>Seg. ID</u>	<u>Name</u>	<u>Req. Des.</u>	<u>Max.Use</u>	<u>Loop Repeat</u>	<u>Notes and Comments</u>
	010	CTT	Transaction Totals	O	1		n1
	020	SE	Transaction Set Trailer	M	1		

Transaction Set Notes

1. Number of line items (CTT01) is the accumulation of the number of HL segments. If used, hash total (CTT02) is the sum of the value of units shipped (SN102) for each SN1 segment.

Transaction Set Comments

1. The HL segment is the only mandatory segment within the HL loop, and by itself, the HL segment has no meaning.

Segment: **ST** Transaction Set Header

Position: 010

Loop:

Level:Heading

Usage:Mandatory

Max Use: 1

Purpose:To indicate the start of a transaction set and to assign a control number

Syntax Notes:

Semantic Notes: 1The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).

Comments:

Notes: Example: ST|856|0123~

Data Element Summary

M	ST02	329 Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

Segment: BSN Beginning Segment for Ship Notice

Position: 020

Loop:

Level:Heading

Usage:Mandatory

Max Use: 1

Purpose:To transmit identifying numbers, dates, and other basic data relating to the transaction set

Syntax Notes: 1If BSN07 is present, then BSN06 is required.

Semantic Notes: 1BSN03 is the date the shipment transaction set is created.

2BSN04 is the time the shipment transaction set is created.

3BSN06 is limited to shipment related codes.

Comments: 1BSN06 and BSN07 differentiate the functionality of use for the transaction set.

Notes: Example: BSN|00|5177699-000536903|20140504|1100|0001|AS~

Segment: **HL** Hierarchical Level - Shipment Level

Position: 010

Loop: HL Mandatory

Level: Detail

Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments

Syntax Notes:

Semantic Notes:

- Comments:**
- 1 The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
The HL segment defines a top-down/left-right ordered structure.
 - 2 HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
 - 3 HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
 - 4 HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
 - 5 HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Notes: Example: HL|1||S|1~

Segment: TD5 Carrier Details (Routing Sequence/Transit Time)

Position: 120

Loop:HL Mandatory

Level:Detail

Usage: Must Use

Max Use: 12

Purpose:To specify the carrier and sequence of routing and provide transit time information

Syntax Notes: 1At least one of TD502 TD504 TD505 TD506 or TD512 is required.

2If TD502 is present, then TD503 is required.

3If TD507 is present, then TD508 is required.

4If TD510 is present, then TD511 is required.

5If TD513 is present, then TD512 is required.

6If TD514 is present, then TD513 is required.

7If TD515 is present, then TD512 is required.

Semantic Notes: 1TD515 is the country where the service is to be performed.

Comments: 1When specifying a routing sequence to be used for the shipment movement in lieu of specifying each carrier within the movement, use TD502 to identify the party responsible for defining the routing sequence, and use TD503 to identify the actual routing sequence, specified by the party identified in TD502.

Segment: **HL** Hierarchical Level -Order Level

Position: 010

Loop: HL Mandatory

Level: Detail

Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments

Syntax Notes:

Semantic Notes:

- Comments:**
- 1 The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
The HL segment defines a top-down/left-right ordered structure.
 - 2 HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
 - 3 HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
 - 4 HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
 - 5 HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Segment: MAN Marks and Numbers

Position: 190

Loop:HL Mandatory

Level:Detail

Usage:Optional (Must Use)

Max Use: >1

Purpose:To indicate identifying marks and numbers for shipping containers

Syntax Notes: 1If either MAN04 or MAN05 is present, then the other is required.

2If MAN06 is present, then MAN05 is required.

Semantic Notes: 1MAN01/MAN02 and MAN04/MAN05 may be used to identify two different marks and numbers assigned to the same physical container.

2When both MAN02 and MAN03 are used, MAN02 is the starting number of a sequential range and MAN03 is the ending number of that range.

3When both MAN05 and MAN06 are used, MAN05 is the starting number of a sequential range, and MAN06 is the ending number of that range.

Comments: 1When MAN01 contains code "UC" (U.P.C. Shipping Container Code) and MAN05/MAN06 contain a range of ID numbers, MAN03 is not used. The reason for this is that the U.P.C. Shipping Container code is the same on every carton that is represented in the range in MAN05/MAN06.

2MAN03 and/or MAN06 are only used when sending a range(s) of ID numbers.

When both MAN02/MAN03 and MAN05/MAN06 are used to send ranges of ID numbers, the integrity of the two ID numbers must be maintained.

Segment: PO4 Item Physical Details

Position: 060

Loop: HL Mandatory

Level: Detail

Usage: Optional

Max Use: 1

Purpose: To specify the physical qualities, packaging, weights, and dimensions relating to the item

Syntax Notes: 1If either PO402 or PO403 is present, then the other is required.

2If PO405 is present, then PO406 is required.

3If either PO406 or PO407 is present, then the other is required.

4If either PO408 or PO409 is present, then the other is required.

5If PO410 is present, then PO413 is required.

7If PO412 is present, then PO413 is required.

8If PO413 is present, then at least one of PO410 PO411 or PO412 is required.

9If PO417 is present, then PO416 is required.

10If PO418 is present, then PO404 is required.

Semantic Notes: 1PO415 is used to indicate the relative layer of this package or range of packages within the layers of packaging. Relative Position 1 (value R1) is the innermost package.

2PO416 is the package identifier or the beginning package identifier in a range of identifiers.

3PO417 is the ending package identifier in a range of identifiers.

4PO418 is the number of packages in this layer.

Comments: 1PO403 - The "Unit or Basis for Measure Code" in this segment position is for purposes of defining the pack (PO401) /size (PO402) measure which indicates the quantity in the inner pack unit. For example: If the carton contains 24 12-Ounce packages, it would be described as follows: Data element 356 = "24"; Data element 357 = "12"; Data element 355 = "OZ".

2PO413 defines the unit of measure for PO410, PO411, and PO412.

Notes: Only Applicable for Single SKU Full Case Cartons

Example: PO4|4|40|CA||||12|CC||||4~

Segment: MAN Marks and Numbers

Position: 190

Loop: HL Mandatory

Level: Detail

Usage: Optional

Max Use: >1

Purpose: To indicate identifying marks and numbers for shipping containers

Syntax Notes: 1 If either MAN04 or MAN05 is present, then the other is required.

2 If MAN06 is present, then MAN05 is required.

Semantic Notes: 1 MAN01/MAN02 and MAN04/MAN05 may be used to identify two different marks and numbers assigned to the same physical container.

2 When both MAN02 and MAN03 are used, MAN02 is the starting number of a sequential range and MAN03 is the ending number of that range.

3 When both MAN05 and MAN06 are used, MAN05 is the starting number of a sequential range, and MAN06 is the ending number of that range.

Comments: 1 When MAN01 contains code "UC" (U.P.C. Shipping Container Code) and MAN05/MAN06 contain a range of ID numbers, MAN03 is not used. The reason for this is that the U.P.C. Shipping Container code is the same on every carton that is represented in the range in MAN05/MAN06.

2 MAN03 and/or MAN06 are only used when sending a range(s) of ID numbers.

When both MAN02/MAN03 and MAN05/MAN06 are used to send ranges of ID numbers, the integrity of the two ID numbers must be maintained.

Segment: **HL** Hierarchical Level - Item Level

Position: 390

Loop: HL Mandatory

Level: Detail

Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments

Syntax Notes:

Semantic Notes:

- Comments:**
- 1 The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
The HL segment defines a top-down/left-right ordered structure.
 - 2 HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
 - 3 HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
 - 4 HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
 - 5 HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Notes: Example: HL|5|4||0~

Segment: PID Product/Item Description

Position: 070

Usage: Mandatory

Max Use: 200

Purpose: To describe a product or process in coded or free-form format

Syntax Notes: 1If PID04 is present, then PID03 is required.

2At least one of PID04 or PID05 is required.

3If PID07 is present, then PID03 is required.

4If PID08 is present, then PID04 is required.

5If PID09 is present, then PID05 is required.

Semantic Notes: 1Use PID03 to indicate the organization that publishes the code list being referred to.

2PID04 should be used for industry-specific product description codes.

3PID08 describes the physical characteristics of the product identified in PID04. A "Y" indicates that the specified attribute applies to this item; an "N" indicates it does not apply. Any other value is indeterminate.

4PID09 is used to identify the language being used in PID05.

Comments: 1If PID01 equals "F", then PID05 is used. If PID01 equals "S", then PID04 is used. If PID01 equals "X", then both PID04 and PID05 are used.

2Use PID06 when necessary to refer to the product surface or layer being described in the segment.

3PID07 specifies the individual code list of the agency specified in PID03.

Notes: Example: PID|F||||SULOCAMIN 0.4MG CAP 90~
